MICROSOFT SENTINEL WORKSHOP

Security Monitoring, Analytics and Response

interlink CLOUD ADVISORS

Azure

Microsoft Sentinel is a scalable, cloud-native, security information event management (SIEM) and security orchestration automated response (SOAR) solution that delivers intelligent security analytics and threat intelligence across the enterprise. It provides a single solution for alert detection, threat visibility, proactive hunting, and threat response.

To better understand all the features of Microsoft Sentinel and how your organization can get the most out of this powerful application, Interlink created a comprehensive, hands-on workshop.

Get Insights On Active Threats Across On-Premises & Cloud Workloads

What the workshop includes:

Joint Threat Exploration Scenario

Together with your team, we deploy Microsoft Sentinel in your environment and execute threat exploration and threat hunting, which is optional. This provides additional readiness for your SecOps resources and gives them to tools to manage the solution as part of your existing System & Organization Controls (SOC).

This engagement is a production deployment of Microsoft Sentinel, and Interlink walks your organization through the product.

At the end of this engagement, your organization will:

- Better understand the features and benefits of Microsoft Sentinel
- Better understand, prioritize, and mitigate potential threats found during the engagement
- Have a defined deployment roadmap for the production deployment of Microsoft Sentinel and services to mitigate risk
- Receive an overview of next steps based on your needs and objectives

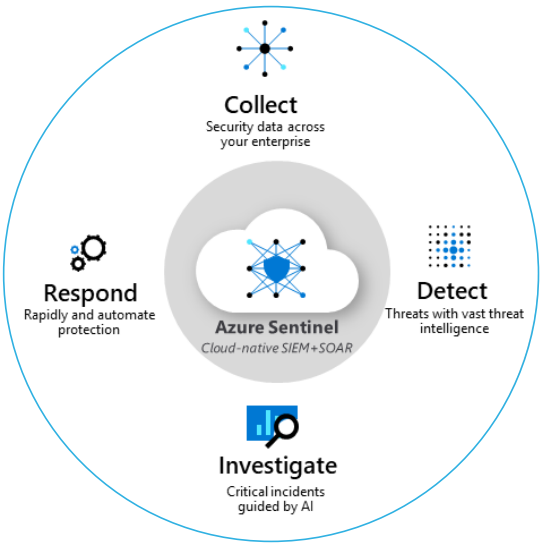
Why Microsoft Sentinel?

- **Better Security** — Provides the tools to quickly see what is occurring across your environment and your cloud applications
- **Save Administrator's Time** — Collect data at a cloud scale across all users, devices, applications, and infrastructures — both on-premises and in multiple cloud environments including non-Microsoft sources like Carbon Black, Symantec, Barracuda, Citrix, and many other big-name security vendors
- **Reduce Damage** — Catch threats early and respond more rapidly
- **Save Money** — Traditional SIEMs have proven expensive to own and operate, often requiring organizations to commit upfront and incur high costs for infrastructure maintenance and data ingestion. With Microsoft Sentinel, there are no upfront costs for the software, you pay for what you use.



Reduce response times and mitigate incidents from occurring with a wide overview of organizational security

Microsoft Sentinel provides you with intelligent security analytics that simplify your security needs and enables your organization to easily assess threat data.

Compliance?

Microsoft Sentinel enables better compliance capabilities to organizations through connecting Office 365 logs, especially when researching past events, including behavior of a former employee, trying to determine access points that hackers may have used for entry, and more. The default log is only kept for 90 days.

How can Interlink help?
