

POWER PLATFORM RISK ASSESSMENT

Optimize use of Power Platform and reduce risk through a strong governance structure.

Organizations are increasing usage of the Power Platform to drive business process optimization.

Interlink will assess your current environment and create a list of recommendations to secure and optimize your environment to drive business value. This assessment will identify areas of risk in your current Power Platform usage and develop recommendations to build governance processes moving forward — ultimately reducing risk and improving business processes.

WITH THIS ENGAGEMENT, INTERLINK WILL PROVIDE:

Information Collection & Assessment:

- ▶ Deploy Power Platform Center of Excellence (COE) tools (or reuse existing installed version)
- ▶ Review of existing flows/apps
- ▶ Review Shared Resources Management and Licensing
- ▶ Review existing business rules for Power Platform administration

Analysis & Recommendations:

- ▶ Analyze collected data for information security risk and cost management risk
- ▶ Evaluate compliance with existing business rules
- ▶ Create recommendations for app/flow, data gateway and connectors, shared resource management, licensing and administration, and updates to business rules as needed
- ▶ Present recommendations and overview of Power Platform licensing model

Implementation of Recommendations:

- ▶ Dedicated time to assist with implementation of governance structure and recommendations

How can Interlink help?

Interlink's team of Microsoft Certified consultants will show you the best ways to manage the Power Platform through an appropriate governance structure to reduce risk and optimize your business process.
