WINDOWS 365
Proof of Concept

Your Cloud-first SMB can enhance productivity through flexibility, by enabling your team to create secure Cloud PCs as your workforce fluctuates and allowing your team to work on the devices they prefer without increasing risk to your environment.

Do you have remote employees, a seasonal workforce, or secondary PC power-users?

While Bring Your Own Device (BYOD) offers flexibility, both to organizations and end-users, it has historically meant additional exposure to potential security risks. Windows 365 is built to enhance the organizational flexibility offered by a BYOD approach while effectively minimizing the security risks. With the power of Microsoft Windows 365, you can improve regulatory compliance and IP protection, simplify and accelerate the onboarding and offboarding process for elastic workforces, and enable secure Cloud PCs — even on personal devices.

OVERVIEW

▶ **Windows 365 PoC Deployment Planning and Setup**
Define pilot users, define configurations, plan Cloud PC configuration, and document the provisioning and deployment process.

▶ **Windows 365 Modern Management Assessment**
Review current client PC management policies, application deployment standards, and computer configuration and identify optimal methodology and documentation processes.

▶ **Windows 365 PoC Modern Management Deployment**
Deploy Windows 365 Cloud PCs up to 10 users, implement configuration, deploy Microsoft Defender for Endpoint for Windows 365 Cloud PCs, and configure deployment updates.
▶ **Windows 365 Knowledge Transfer**
Deliver a Windows 365 training session with up to 10 customer IT staff members and cover best practices (including deployment and troubleshooting processes).
