The professional services industry requires data growth and management to be streamlined to monitor markets, access research, and maintain business processes through M&As. The Power Platform solutions are scalable and work within the large product line that includes Office 365 and Microsoft applications, as well as integrates many third-party titles, so your workforce saves time and works efficiently through access to automation and visualization of data like never before.

## USE CASES

### Efficiency

If you need a report that requires multiple individuals to provide their current status every Tuesday of the week, Power Platform can take on the burden of organizing this effort. With a Power Automate workflow and simple SharePoint list, it is easy to see who has and who has not responded to your request, send reminders and escalated reminders (reminders that are also sent to the management of the responsible party), delegate the task of responding, capture additional notes, compile the results, and share the results in an email to the Team. You no longer need to devote hours to monitoring and chasing down who has and has not done their homework!

### Mergers and Acquisitions

The process of acquiring and migrating business processes and data in an efficient way is critical to business success. Using Power Platform, organizations are able to automate data extraction, facilitate transformation and view insightful reporting. Through the automation of business processes and workflows, your organization can save time and focus on critical tasks.
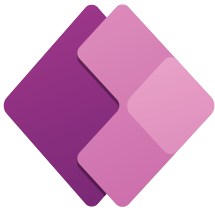

### Utilize Insights

Departments within professional services are usually very siloed due to sensitive data management. Power Platform saves time by expediting the multi-department processes by connecting to Microsoft and Office 365 applications, as well as many third-party titles. These connections can deliver individualized services and financial information, as well as market to customers or prospects with a simple click.

**M&A**

## Learn how Interlink's experts can help your organization leverage the Power Platform today!

Interlink's Power Platform offering can transform the way your business operates. From setting up governance and use cases to deep application development, we will work with you to implement and optimize this powerful set of tools in your specific environment. **Contact us today!**

The 'Power Platform is a collection of four Microsoft products: **Power Automate, Power Apps, Power BI, and Power Virtual Agents**. You can connect the Power Platform to Office 365, Dynamics 365, Azure, and hundreds of other apps to build end-to-end business solutions and gain insight into your organization's data.

## Power Apps

**Quickly build low-code + mobile-friendly apps that connect to your data sources or extend functionality, which empowers your organization to solve business challenges and streamline processes.**

Microsoft's Power Apps allows everyone to build and share low-code applications. Your organization can start building and launching apps through a simple platform with prebuilt templates as well. Connect your data sources through Power Apps to create solutions that scale to meet your organization's needs.

## Power BI

**Experience your data – your way. Unify data from many sources to create interactive, immersive dashboards and reports that provide actionable insights and drive business results.**

Microsoft's Power BI is an interactive business analytics tool that provides rich visualizations and self-service business intelligence capability. It allows any user to build powerful reports and dashboards to provide valuable insights into their data.

## Power Automate

**Automate workflows directly in your apps with a no-code approach that connects to hundreds of popular apps and services.**

Save your organization time and boost productivity by streamlining repetitive tasks and paperless processes. Refocus your attention on what is important by leveraging the intelligent workflows of Power Automate.

## Power Virtual Agents

**Easily build chatbots to engage conversationally with your customers and employees – no coding required.**

Quickly create AI-powered chatbots that can resolve common issues and answer questions around the clock — saving your team time and empowering your organization to work more productively.
